PROFESSIONAL SUMMARY

Accomplished Software Engineer with 6+ years of specialized experience architecting mission-critical, large-scale mobile financial systems. Proven track record scaling multi-module Kotlin (AmarthaPartners) and Flutter (AmarthaFin/AFin) mobile applications, engineering resilient offline-first transactional architectures for nationwide microfinance operations, and sustaining a 99.81% crash-free session rate across production releases. Expert in Clean Architecture, MVVM, dynamic Firebase Remote Config feature gating, and leading staged release governance as Release PIC and Gatekeeper.

WORK EXPERIENCE

Mobile Engineer (Flutter & Kotlin) | 12/2022 - current

PT Amartha Mikro Fintech

- Managed the deployment process by uploading **iOS builds to TestFlight** and **APK releases to the Google Play Store**, ensuring smooth, compliant, and timely release cycles.
- **Connected Google Play Store** reviews with Slack, enabling real-time monitoring of user feedback and accelerating response time to critical issues and user sentiments.
- Migrated extensive features from the **AmarthaFin Kotlin** codebase to **Flutter**, significantly improving development efficiency, performance, and long-term maintainability.
- Developed a custom **dynamic widget library**, enabling flexible UI rendering, reusable components, and modular interface customization.
- Spearheaded runtime configuration management via **Firebase Remote Config**, enabling automated **force updates**, remote maintenance routing, and controlled zero-downtime feature rollouts.
- complex fintech requirements into robust, full-stack technical architectures.
- Implemented **Firebase A/B Testing** to drive data-driven experimentation and optimize feature and UI performance.
- Integrated essential **Firebase services**, including real-time notifications and **Crashlytics monitoring**, ensuring application stability, proactive issue detection, and rapid crash resolution.
- Designed an **AI assisted Bitbucket CI/CD review** pipeline to automate pull request validation and streamline engineering workflows.
- Refactored complex XML View hierarchies into lightweight, decoupled **Jetpack Compose components**, streamlining rendering performance and eliminating view-binding technical debt.
- Integrated **Code Breaker** logic to enhance internal validation processes and modular workflow handling.
- Developed secure synchronization mechanisms between **Room Database** and **Firebase Storage**.
- Authored and maintained Technical Review Documents (TRD) to provide structured analysis, architectural insights, and technical justification for major implementations.
- Created and facilitated Request for Comments (RFC) documents to support collaborative decision-making and engineering alignment on new technical proposals.
- Integrated CleverTap as a third-party analytics platform to track user behavior and capture real-time user errors directly from live market usage.
- Cross-Functional Leadership: Collaborated directly with Product Managers and Designers to translate

Android Engineer | 05/2022 - 11/2022

PT Sejahtera Lunaria Annua

- Successfully integrated digital payment solutions, including **ShopeePay** and **OVO**, to enhance transaction efficiency and user convenience within the application.
- Designed and implemented the **Robo Daily Tenure feature**, improving automation capabilities and optimizing operational workflows.
- Implemented comprehensive **general error handling** to improve system robustness and stability.
- Developed and maintained **unit tests** to ensure consistent code quality and reduce regression issues.
- Refactored the application architecture to the **MVVM** design pattern, significantly enhancing scalability, maintainability, and long-term development efficiency.
- Maintain **Firebase Crashlytics**

Android Engineer | 08/2019 - 04/2022

PT Payfazz Teknologi Nusantara

- Integrated **QRIS** payment capabilities using a **barcode-based** interface, enabling seamless and efficient user transactions.
- Implemented advanced notification systems utilizing **Firebase** and **Netcore**, ensuring reliable and real-time message delivery across the application.
- Developed and enhanced core application **modules**, including Subscription, Shift Management, Order History, and Backend Synchronization, along with Tokofi-related feature support.
- Integrated **Datadog** for monitoring, performance analytics, and real-time observability to strengthen system reliability.
- Implemented **Firebase Remote Config** for **dynamic feature** management and real-time configuration updates without requiring new app releases.
- Integrated **Firebase A/B Testing** to support data-driven decision making and improve feature performance through controlled experiments.
- Integrated **Deeplink** functionality to enhance navigation flows and support seamless user routing from external sources.
- Maintained and monitored **Firebase Crashlytics**, ensuring proactive crash analysis, stability improvements, and rapid issue resolution.
- Established automated build and deployment pipelines using **CodeMagic**, significantly optimizing **CI/CD** processes and improving release efficiency.
- **Refactored critical modules**—such as Shift, Manage Shop, Login, and Register—to elevate code quality, enhance maintainability, and improve overall application performance.
- Managed the complete release lifecycle of the POST application, including preparation, quality assurance, and successful deployment to the **Google Play Store**.

ACADEMIC HISTORY

Politeknik Elektronika Negeri Surabaya | 2015-2019

Bachelor Degree (D4)

- Completed a big project on AI algorithms
- Published research on Image Processing in peer-reviewed journal
- Achieved a 3.47 GPA in core engineering courses

CORE TECHNICAL COMPETENCIES

Programming Language & Architecture

Kotlin, Java, Dart/Flutter, Android SDK, Jetpack Compose, Coroutines & Flow, Clean Architecture, MVVM, Multi-module Architecture, Room Database, Dagger Hilt, Retrofit, OkHttp, Figma, Next.js, Golang

FinTech & Systems

Offline-First Transaction Sync, Daily Closing Reconciliation, Cash Handling Revamp, Digital Payment Gateways (QRIS, ShopeePay, OVO, Virtual Accounts, Poket), Digital Loan Book (DLB).

Cloud, DevOps & QA

Firebase (Remote Config, Crashlytics, FCM, A/B Testing, storage), Bitbucket Pipelines (CI/CD), Git, Unit Testing (JUnit, MockK, Mockito), KrakenD API Gateway, CleverTap Analytics, Kafka, Grafana, new relic.

Leadership & Process

Technical Review Documents (TRD), Request For Comments (RFC), Observability & Test Specs, Release PIC / Gatekeeper, Agile/Scrum Sprint Planning.

CERTIFICATION

Event-Driven Architecture: Maintaining Data Consistency Across Services

Introduction to Observability & Monitoring: Building Reliable Systems

Indonesia Android Kejar

Flutter Development Bootcamp with Dart (Udemy)
